

## About Leaf Critters®

### Our Mission -

Leaf Critters is an eco-educational and recreational company that exists to tell about leaves, their sources, and what we can learn from them. The products we offer all help to inspire a renewal of the earth and its inhabitants.

Shuggie™

### Their Story -

Ever wonder what happens to the leaves in the trees during fall? Most of the leaves lose their green color and fall off the tree. But some of the leaves never fall to the ground the way the other leaves do ... they keep flying and flying. And as they make their long flight, more than just their color changes! They are transformed and made anew to live in a unique land, the Valley of the Leaf Critters.

Now, a few of these **delightful** Leaf Critters® have reappeared to connect children with nature, the outdoors, and of course - Trees!

## Products Offered:

### For Schools: K-5 Curriculum

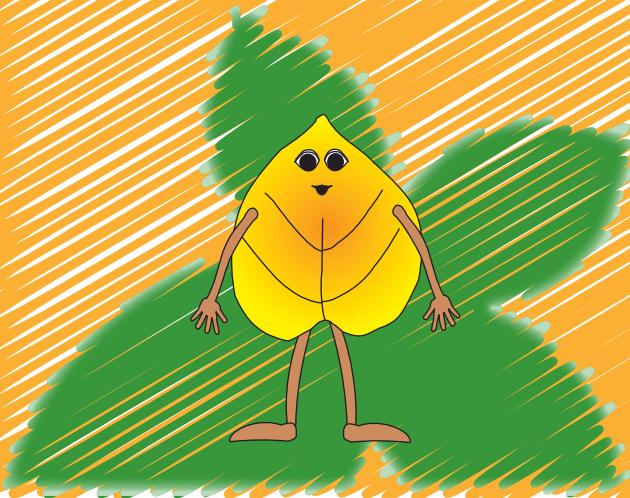

Many of the new NC Essentials for Science are met with this curriculum. Log onto [www.LeafCrittters.com](http://www.LeafCrittters.com) to view the objectives and find how Leaf Critters can be used to meet these.

The Leaf Critters® curriculum uses different Leaf Critters® characters each year to teach about plant growth, soil, and pollination. Geography, botany, visual arts, and oral presentation are incorporated into the lessons.

Students are encouraged to interact with nature and go "See the Tree™" that the Leaf Critter calls home. By encouraging students to discover trees, they are being directed to the outdoors. This gets them involved with 3D nature rather than being inside with 2D images.

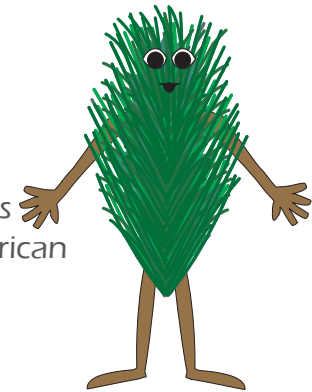

The Leaf Critters® are a fun, creative, and memorable approach to tree identification and nature connection.
